WHAT IS CABLE LINER ?

The Cable Liner is a range of automated people mover (APM) products designed by DCC Doppelmayr Cable Car for use at airports, in city centres, intermodal passenger transport connections, park and ride facilities, campuses, resorts and amusement parks.

TECHNOLOGY

SIMPLICITY

- Intelligent system concepts, each individually tailored to the customer's needs
- Few moveable parts ensures fewer defects
- The train affords the use of a simplified control system because a grip attaches it to the haul rope at an assigned point
- A standardized, modular system allows for rapid installation and testing schedules
- Stationary drives and an emergency drive backup ensure stalled trains can easily be returned to the station for simple and safe evacuation

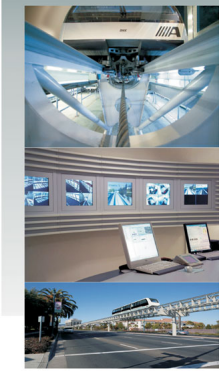

FUNCTIONALITY

- Low initial system investment costs
- Environmentally friendly
- Custom tailored system designed for its unique environment
- Simple, proven base technology
- System safety and design according to international APM codes and standards

RELIABILITY

- Outstanding performance records
- Operational in even the harshest climate conditions (snow, ice, wind, etc.)
- Ropeway equipment proven over decades

SYSTEM FEATURE

■ Cable-propelled

- Proven ropeway technology
- A central station powers the system, with the cable providing tractive force
- Fixed grip assembly connects the train to the cable
- With the train attached to the cable by its grip, the cable can perform all essential functions such as propulsion, acceleration, deceleration and braking
- The vehicles don't have complex on-board assemblies, such as drive engines, gearboxes or brakes

■ Fully-automated

- No driver, conductor or on-board operator required
- Monitoring of system operation from central control room

■ Fast and Flexible Installation

■ Smaller System Footprint

■ Easily Integrate
